No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 38, Application US/10355975A

Patent No. 675923

GENERAL INFORMATION:
APPLICANT: Immunex Corporation
APPLICANT: Immunex Corporation
APPLICANT: Martin, Unia
APPLICANT: Martin, Unia
APPLICANT: Anderson, Dirk M.
TITLE OF INVENTION: CALCIUM/CALMODULIN-DEPENDENT KINASE
FILE REFERENCE: 2923-B
CURRENT APPLICATION NUMBER: US/10/355,975A
CURRENT FILING DATE: 2003-01-30
NUMBER OF SEQ ID NOS: 38
SOFTWARE: Patentin version 3.1
SEQ ID NO 38
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Indels

Patent No. 6492156

GENERAL INFORMATION:

APPLICANT: YAN, Chunhua et al.

TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC

TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES

TITLE OF INVENTION: THEREOF

TITLE OF LINVENTION: THEREOF

FILE REFERENCE: CL001306

CURRENT APPLICATION NUMBER: US/09/984,890
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DSWSLGVLLYILVHGTMPFDGQDHKTLVKQISNGAYREPPKPSDAC-GLIRWLLMVNPTR 238

The invention relates to an AWPK (AWP-activated protein kinase) related kinase, designated SNARK polypeptides and polynucleotides. SNARK kinase, designated SNARK polypeptides and polynucleotides stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK citimates liver CPT-1 thus enhances lipid metabolism in liver cells and in other cell types such as heart and skeletal muscles, as well as in other cell types such as heart and skeletal muscles, as well as concreases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted in other insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and some type of disorders of lipoprotein production leading to increased come type of disorders of lipoprotein production leading to increased administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as diabetes. SNARK activity either in vivo for therapeutic purposes. Cor in vitro, for drug screening and related investigational purposes. SNARK antagonists may be administered to increase fluel production, and decrease glucose uptake and increase levels of blood glucose in a parient configurate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     HRDLKLENILLDANGNIKIADFGLSNLYHKGKFLQTFCGSPLYASPEIVNGKPYVGPEVD 180

from human CDNA libraries which can be used for gene therapy or in vaccines. The polynucleotides of the invention and antibodies encoded by them may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate polypeptide expression. The products of the invention may also be used to identify modulators of expression and activity and to down regulate expression and activity. The antibodies of the invention may also be used as diagnostic agents for detecting the presence of polypeptides in samples. This sequence represents a polypeptide described in the disclosure of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181 SWSLGVLLYILVHGTMPFDGQDHKTLVKQISNGAYREPPKPSDACGLIRWLLMVNPTRRA 240

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for Synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length not form part of the invention. Note: The sequence data for this patent did form at directly from EPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              172
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               232

Ren F;

The invention relates to an isolated polynuclectide (I) comprising a nucleotide sequence selected from any of 948 sequences (ABZ11119-ABZ1066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The cacoded polypeptides (ABR68902-ABR68949) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cellimaging, and places, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed appecification, but was obtained in electronic format fcation, but was obtained in electronic format

The present invention relates to the isolation of a novel human protein kinase designated 3700, and the polynucleotide sequence encoding it. The invention also describes the use of a modulator of the activity of protein kinase (PK) 3700 for making a medicament or pharmaceutical composition for modulating the ability of a cell to phosphorylate an amino acid residue of a substrate protein Modulators of protein kinase 3700 activity are useful for modulating protein phosphorylation, cell signalling, tumourigenesis, mitogenesis, transcription of a gene, angiogenesis, tissue repair, tissue repearation, esteablishment or progression of atherosclerosis, and signalling across the blood-brain progression of atherosclerosis, and signalling across the blood-brain parrier. The polynucleotide and polypeptide molecules for protein kinase 3700 may be used as diagnostic targets and therapeutic agents for prognosticating, diagnosing, preventing, inhibiting, alleviating, or curing PK-related disorders and cellular proliferative and/or carcinoma, sarcoma, metastatic disorders or leukaemia). The 3700 polynucleotide sequence can be used to express protein kinase 3700, to detect a genetic alteration in a 3700 gene, in chromosome mapping, for tissue typing, in forensic biology, and as surrogate markers. The present

                                                                                                                                                                                                                                                   This invention relates to novel nucleic acids encoding human PRO secreted and transmembrane proteins. Extracellular proteins play important roles in the formation, differentiation and maintenance of multicellular organisms. The fate of many individual cells (for example proliferation, migration or differentiation) is typically governed by information received from other cells and the immediate environment. The information is often transmitted by secreted polypeptides (for example mitogenic
                                                                                                                                                                                          1 YEFLETLGKGTYGKVKKARESSGRLVAIKSIRKDKIKDEQDLLHIRREIEIMSSLNHPHI

```
factors, survival factors, cytotoxic factors, differentiation factors, neuropeptides and hormones) which are received and interpreted by diverse cell receptors or membrane bound proteins. These membrane bound proteins and receptors may be of use as pharmaceutical and diagnostic agents, such as in the blocking of receptor-ligand interactions. The current invention provides the amino acid sequences of novel human membrane bound receptors and proteins, along with the CDNA sequences encoding them. The novel proteins of the invention may have cytostatic activities through the stimulation of chondrocytes. The nucleic acids of the invention may be useful for the manufacture of a medicament for diagnosing or treating a detecting the expression of a tumour associated gene. The present sequence is the amino acid sequence of a human PRO protein of the

                                                                                                                                                                                                                                                                     ö
                                                                                            This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins intra associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polypeptide sequence is a full length human protein of the invention.

The present invention relates to human Adenosine Monophosphate activated Protein Kinase (AMPK)-related kinase 5 (ARK5/ KIAA0537) and its coding sequence, which are useful for imparting stress resistance to cells. ARK5 is useful for treatment and prevention of tumours, nervous disorders, muscle disorders and ataxia telebanglectasia. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       kinase; human; tyrosine protein kinase; serine/threonine protein kinase; PTK; STK; gene therapy; cancer; immune-related disease;
                                                                                                                                                                                                                                                 The invention relates to human PRO polypeptides and the polynucleotides encoding them. The polypeptides and polynucleotides are useful for treating and diagnosing immune related disorders in mammals. The immune related disorders include systemic lupus erythematosus, rheumatoid arthitis, osteoarthritis, juvenile chronic arthritis, systemic sclerosis, Sjogren's syndrome, vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocytopenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, demyelinating diseases of the central or peripheral nervous system, demyelinating polyneuropathy.

This invention relates to a novel isolated, enriched or purified nucleic acid molecule that encodes a kinase polypeptide. Specifically, it relates to human tyrosine and serine/threonine protein kinases (FTK's and STK's), as well as protein kinase-like enzymes. The present invention describes screening methods to identify agonists, antagonists and antibodies that can be used to modulate the activity or function of the mammalian kinase enzymes. As such, these compositions can be used for gene therapy purposes to treat diseases or disorders including cancer, immune-related diseases, cardiovascular disease, brain or neuronal associated disease, metabolic and inflammatory disorders. Accordingly, they exhibit cytostatic, neuroprotective, immunomodulator and antilinflammatory activities. This polypeptide sequence is a human kinase protein sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      156

WPI; 2002-090207/12. N-PSDB; AAD26459. polypeptides, useful for diagnosing, treating or preventing disorders growth and development, cardiovascular and lipid, and diseases such as of growth and development, cardiovascular a cancer, comprise human kinase polypeptides.

Claim 1; Page 152-153; 197pp; English

The invention relates to human kinase PXIN proteins and their corresponding cDNAs. A composition containing PXIN agonist is useful for treating a disease or condition associated with decreased expression of PXIN and a composition comprising PXIN antagonist is useful for treating a disease or condition comprising PXIN antagonist is useful for treating a disease or condition associated with overexpression of PXIN. The disorders include cancer (leukaemia, adenocarcinoma, lymphoma, melanoma, myeloma, sarcoma, tratocarcinoma, Hodgkin's disease); immune disorder (Acquired Immune Deficiency Syndrome (AIDS), asthma, Addison's disease, atheroselerosis, anaemia, allergies, adult respiratory distress syndrome, autoimmune thyroiditis, gout, bronchitis, Crohn's disease, disease, mellitus, multiple sclerosis, Good pasture's syndrome, Graves' disease,

```
rheumatoid arthritis, Sjogren's syndrome, uveitis, ulcerative colitis, bacterial, parasitic, fungal, viral, protozoal and helminthic infections) growth and development disorders (arteriosclerosis, cirrhosis, hepatitis, Cushing's syndrome, hypothyroidism, cerebral palsy, cataracts; cardio vascular disease (arteriovenous fistula, hypertension, vasculitis, aneurysms, congestive heart failure, angina pectoris, myocarditis, ischaemic heart disease, chronic bronchitis, lung tumours); lipid disorder (fatty liver, Fabry's disease, Niemann-Pick's disease, hypocholesterolaemia, obesity). PKIN DNA is useful for assessing toxicity of a test compound and in gene therapy. The present sequence is human
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240

(DECO-) DECODE GENETICS EHF.

Sigurdsson GT Martinez RAM,

```
ABZ77126 to ABZ77165 encode the human protein kinases given in ABP96048 to ABP96087. The protein kinases have antiasthmatic, antiinflammatory, amridiabetic, antiparkinsonian, antimigrafine, cardiant, cytostatic, immunosuppressive and vulnerary activities, and can be used in gene therapy. A protein kinase therapeutic agent from the present invention, particularly a protein kinase gene agonist or antagonist, can be used for treating a disease or condition associated with a protein kinase in an individual. These diseases include chronic obstructive pulmonary diseases (COPD), asthma, non-insulin dependent diabetes, Parkinson's disease migraine, myocardial infarction, inflammatory bowel disease, autoimmune disorders (e.g. allograft rejection or graft vs. host disease), cancers (e.g. leukaemias) or wound granulation
                                                                            New protein kinase genes and polypeptides, useful for diagnosing diseases associated with a protein kinase, or in gene therapy for treating e.g. Parkinson's disease, migraine, myocardial infarction, allograft rejection
                                                                                                                                                                                                         Claim 9; Page 87; 258pp; English

The present sequence is a novel protein kinase. The novel protein kinases, and the nucleic acids that encode them may be used in the treatment and diagnosis of disasses associated with inappropriate kinase expression such as immune-related diseases and disorders, cardiovascular disease, complementary sequences may also be used as DNA probes in diagnostic assays. The kinase polypeptides may be used as antigens in the production of antibodies of kinase expression and activity. Diseases related to kinase antibodies expression and activity. Diseases related to kinase expression and activity. Diseases related to kinase autoimmune disorders, complications of organ transplantation, myocardial infarction, immune disorders, cardiomyopathies, strokes, renal failure, oxidative-stress related disorders, chronic inflammatory bowel disease, chronic inflammatory pelvic disease, multiple sclerosis, asthma, osteoarthritis, processis, rhinitis, autoimmunity, diabetes, cancers and reproductive
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    181 SWSLGVLLYILVHGTWPFDGQDHKTLVKQISNGAYREPPKPSDAC-GLIRWLLMVNPTRR 239

US-09-963-159-2
i Sequence 2, Application US/09963159
i Patent No. US20020077312A1
i GENERAL INFORMATION:
APPLICANT: Curtis, Rory A.J.
APPLICANT: Galvin, Katherine M.
TITLE OF INVENTION: 3700, A NOVEL HUMAN PROTEIN KINASE AND USES THEREFOR FILE REFERENCE: 10147-5001.
CURRENT APPLICATION NUMBER: US/09/963,159
CURRENT FILING DATE: 2001-09-25
i PRIOR PILING DATE: 2000-09-25
i NUMBER OF SEQ ID NOS: 3
i SOFTWARE: PatentIn Ver. 2.1
i SEQ ID NO 2
i TYPE: PRT
i TYPE: PRT
i ORGANISM: Homo sapiens

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C,Comment: This enzyme plays an important role in a signal transduction cascade regulation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 A Description: catalyzes the formation of peptidyl-serine-phosphate or peptidyl-threonin (S. Superfamily: AMP-activated protein kinase; protein kinase; protein kinase; protein kinase; protein kinase; protein kinase; serine/threonine-specific protein kinase F:17-271/Domain: protein kinase homology «KIN»
F:55-33/Region: protein kinase ATP-binding motif F:55-33/Region: protein kinase ATP-binding motif F:48,67,142,144/Active site: Lys, Glu, Asp, Lys #status predicted
F:147,151/Binding site: magnesium (Asn, Asp) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             a protein
serine/threonine-specific protein kinase (BC 2.7.1.-) AK21 - Arabidopsis thaliana NiAlternate names: protein kinase SNF1 homolog C;Species: Arabidopsis thaliana (mouse-ear cress) C;Species: Arabidopsis thaliana (mouse-ear cress) C;Date: 30-Sep-1993 #sequence revision 30-Sep-1993 #text_change 09-Jul-2004 C;Accession: JC1446; S58266; S66334 R;LeGuen, L.; Thomas, M.; Bianchi, M.; Halford, N.G.; Kreis, M. A;Altle: Structure and expression of a gene from Arabidopsis thaliana encoding a particle communication of the structure and expression and structure and expression of the structure and expression expre
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   IIAIHEVFENSSKIVIVMEYASRGDLYDYISERPRLSERDARHFFRQIVSALHYCHQNGI 119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      DSWSLGVLLYILVHGTMPFDGQDHKTLVKQISNGAYREPPKPS-DACGLIRWLLMVNPTR 238

01-MAR-2004 (TrEMBLrel. 23, Last sequence update)
01-MAR-2004 (TrEMBLrel. 26, Last annotation update)
Mus mustalus adult male diencephalon cDNA, RIKEN full-length
library, clone:9330154N24 product:weakly similar to PROBABLE
SERINE/THEREONINE-PROTEIN KINASE KIAA0537 (EC 2.7.1.-).
Submitted (FEB-2003) to the EMBL/GenBank/DDBJ databases.
-!- SIMILARITY: Belongs to the Ser/Thr protein kinase family.
EMBL; BCO46833; AAH46833.1; -.
